South-East European Digital Television
SEE Digi-TV

Use of ICT technologies and services has a major impact to the sustainable development of the society. SEE Digi-TV will directly speed-up the digitalization of the broadcasting services, and will trace the path for a wider deployment of ICT broadband services. The inclusion of stakeholders, especially broadcasters and industry, is essential and will have positive influence on business development. On a long term, the project will solve issues of digital divide and social inclusion and thus will contribute to the creation of the region of equal opportunities. The overall objective of the SEE Digi-TV is harmonization of the activities in the target SEE region related to the introduction of Digital Broadcasting services, which will: (a) speed-up the overall process of analog switch-off in the region and further developments to more efficient technologies, (b) maximize the harmonization of the legislative and technical frameworks with the EU digitalization process, (c) avoid policy, technology and market fragmentation, (d) develop regional strategy for optimal use of freed frequency spectrum for new ICT broadband services and (e) efficiently manage digital dividend. SEE Digi-TV is based on distribution of television signal and new services to everyone in SEE region no matter of their gender or ethnicity. Furthermore the project will contribute to environmental sustainability as new digital broadcasting technology at both sides, transmitting and receiving sides, lowers the power consumption significantly.

Project budget:

- Overall project budget: 1.668.750,00 €
- ERDF contribution: 566.534,00 €
- IPA contribution: 521.503,00 €
- ENPI contribution: 0,00 €

Project start date / end date:
2011-01 / 2013-04

Call: 2
Priority: Improvement of the Accessibility
Area of intervention: Develop strategies to tackle the digital divide
